# Elegant Elements for WPBakery Page Builder

15.09.2020

---

## Overview

Elegant Elements is packed full of features that will help you design your website faster than ever and without any coding knowledge. It is a Complete WPBakery Page Builder Toolkit for all your web design needs! Now design the complete website using WPBakery Page Builder including Header, Footer, Mega menus and not just the page content.

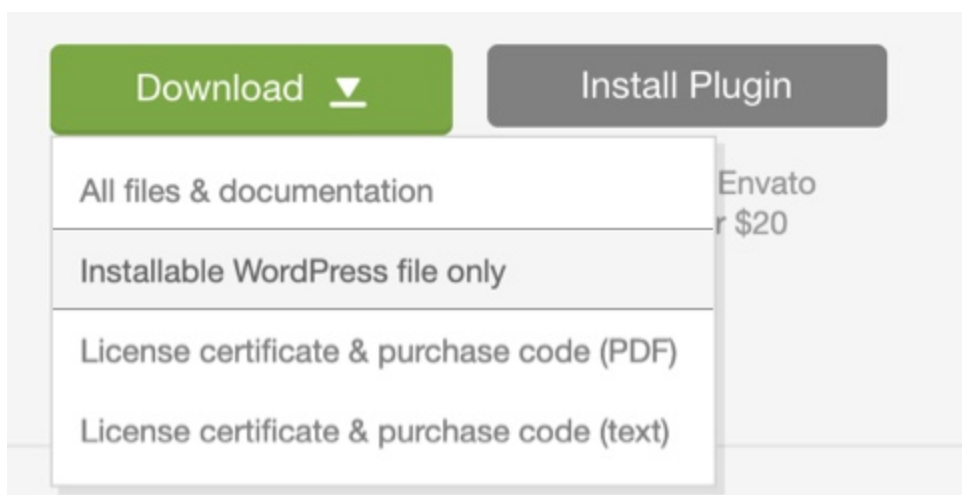

## Specifications

Elegant Elements plugin is an add-on for WPBakery Page Builder. In order to get this plugin working, you need to meet the following minimum requirements -

- WordPress - 4.5
- PHP - 7.0 and above
- WPBakery Page Builder - 6.0 and above

## Installation

1. Download the “Installable WordPress File” from the downloads dropdown on Codecanyon Downloads page - <https://codecanyon.net/downloads>

2. Go to your WordPress admin -> Plugins -> Add New plugin page and click on the “Upload” button near the “Add Plugins” page title.
3. Click on the “Choose File” button and select the downloaded plugin from Codecanyon. Once the file is selected, click on the “Install Now” button to install the plugin
4. Once the plugin is installed, click on the “Activate Plugin” link to activate it.
5. Now, start building your website faster than ever.

## Elegant Elements Features

Elegant Elements for WPBakery Page Builder is built for everyone and to help speed up your website design process using WPBakery Page Builder. It has many features that are required but missing in the core WPBakery Page Builder. Let's take a look at the overview -

### 50+ Elements

Elegant Elements for WPBakery Page Builder provides you with more than 50 custom and beautifully crafted elements that will further enhance the look and feel of your website. All the elements are made compatible with frontend editor so you can design your website with the comfort of WPBakery Frontend editor and make live changes without refreshing the page every time you make any changes like how you do with the backend builder.

### Row & Column Background Slider

Adding an image or a video to your row background makes it look nice, how about adding the image slider? Yes, you can add an image slider to your row background and the column background as well with many awesome animations as well.

### Row & Column Background Gradients

Gradient backgrounds add another layer of awesome styles for your rows and columns. You can control the gradient top and bottom colors and positions. Setting up the gradient over an image with transparent colors will make it look even more beautiful.

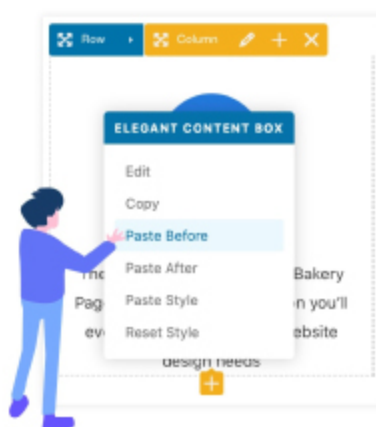

## Context Menu

Context menu or the right-click menu offers you the flexibility to design your website and help you speed up things like copy element styles, insert elements before or after a certain element, and also let you copy any element's shortcode to insert anywhere. With the help of a context menu, you can design your website much faster. Just copy the element and you can use it to apply the same styles on other instances of the element or insert it anywhere on the page.

## Right-click Menu

WPBakery Add-on

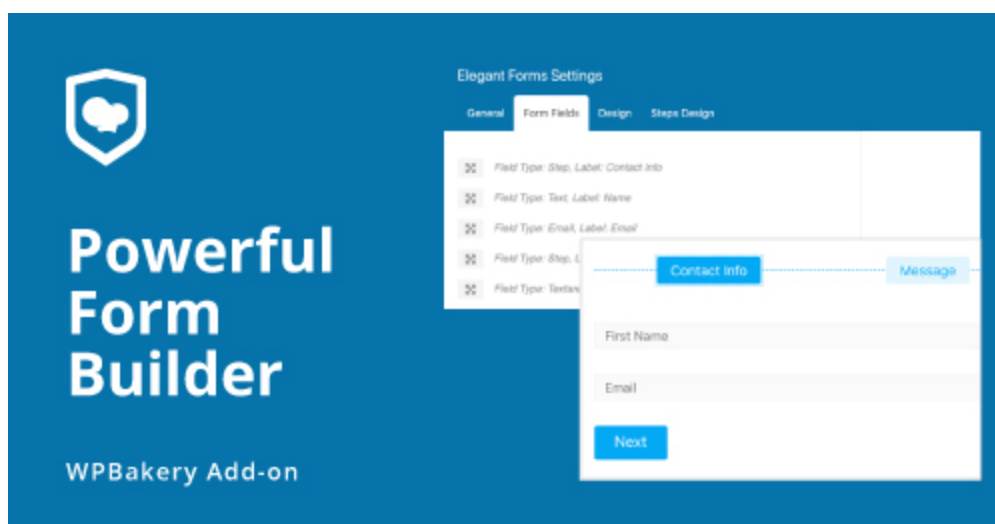

The right-click menu works only for the elements and not for the columns and rows. We are working on extending the functionality to rows and columns as well and it will be available in the future updates. Right-click menu have these options -

- **Edit** - Click to edit the element
- **Copy** - Click to copy the element. This will also copy the shortcode for that element so you can use to paste the shortcode in text editor as well
- **Paste Before** - Use this option if you want to insert the copied element just before the element you right-click.
- **Paste After** - Similar to the above option, this will insert the copied element right after the element you've right-clicked
- **Paste Style** - If you right click on the same element on the page that you have copied, this option will apply only the styles such as colors, paddings etc. to that element
- **Reset Style** - This will help you reset the current right-clicked element styles to the default state. Other options such as text, links etc. will remain.

## Powerful Form Builder

Elegant Elements provides you with the most powerful form builder using WPBakery Page Builder. You can design any kind of forms including the multi-step forms. You can send your data anywhere using the webhooks or get an email update. The forms element is much powerful to handle any kind of form design. We have tested the plugin with submitting the form data to custom webhooks and api endpoints with Pabbly Connect and Zapier.

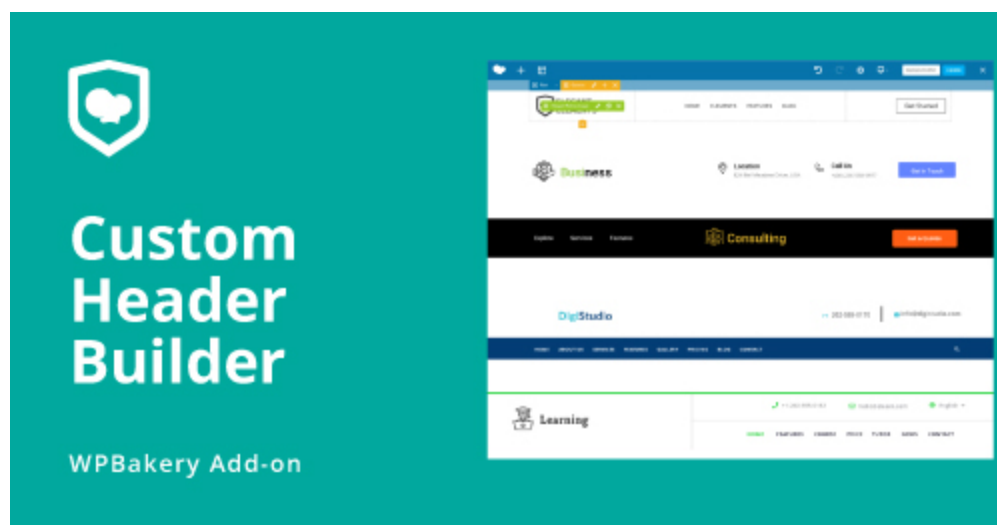

Form element allows you to create any number of forms on your website and collect data to either email, an API or webhooks. You can use any automation softwares like Pabbly Connect or Zapier to collect the data you'll be submitting from the form on your website.

Elegant Forms element also have an ability to create multi-step forms. When you've many fields in your form, instead of displaying them in a very long form, you can simply divide them into multiple tabs using the step element. You can style the steps as per your requirements. Form steps have three styles - Label, Step Count, and Progress Bar.

## Custom Header Builder

WPBakery Page Builder works great on building custom page layouts, so why rely on themes for the site Headers? Elegant Elements provides you the unique way to design your headers with drag and drop functionality. So, you get complete freedom to design the entire website however you like it. It's perfect for websites that need custom Header layouts which standard WordPress Themes don't offer.

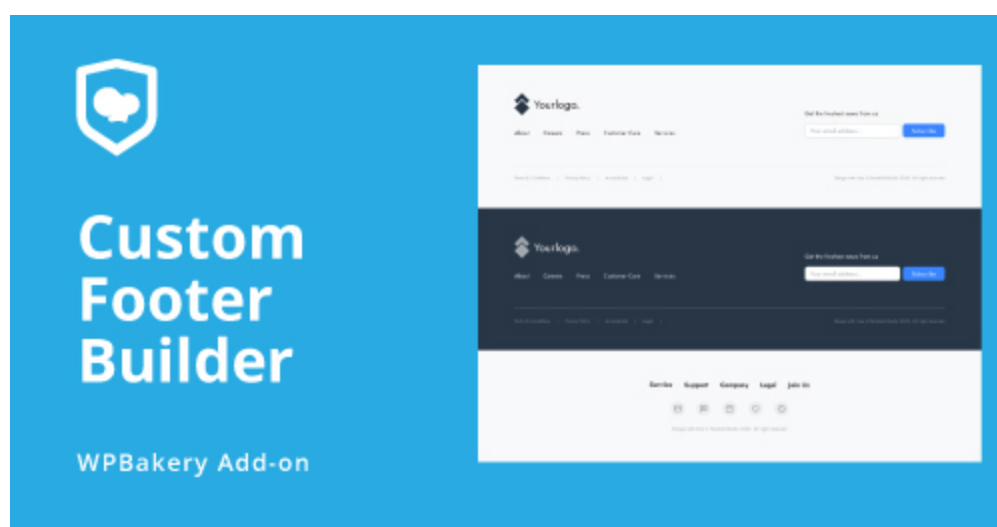

Why limit yourself from building complete website using WPBakery Page Builder and rely on premium themes for the simple header functionality? You can design your custom header and make it look unique to your site using the Elegant Header Builder with WPBakery Page Builder.

Designing your site header is as simple as designing a row with some columns in a page. You can design your site header live with frontend editor or in backend editor. The options to set display rules for your header makes it more advanced as it allows you to display different headers on different post types and pages.

## Custom Footer Builder

Footers are the most important part of every website, why not design it with WPBakery Page Builder and make the most out of it? You can design different footers for different pages as well. Widgets are not enough when you want to add more value to your footers and they won't give you complete freedom to design your site footer, so we developed the footer builder using WPBakery Page Builder inside Elegant Elements.

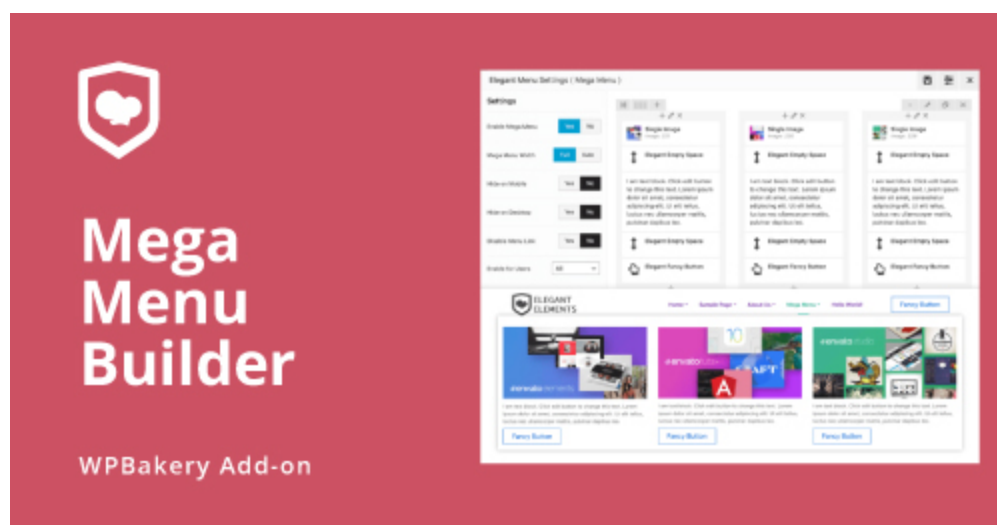

Similar to what we said about site headers above, your website footer is the most important part of your site and if you can't design it the way you want, it simply differs the purpose of the footer. So, again, why limit your site footer to use the layouts your premium theme offers? You can design your own header with the Page Builder elements and make most out of it.

Don't just display the widgets and common footer layouts. Design the footer with the very best way possible and make your website stand out.

## Mega Menu Builder

Navigation is the most important part of any website, so we do take extra care of its design with the ability to design the mega menu with WPBakery Page Builder elements. Now, you can design the mega menu of your website with drag and drop flexibility with Elegant Elements!

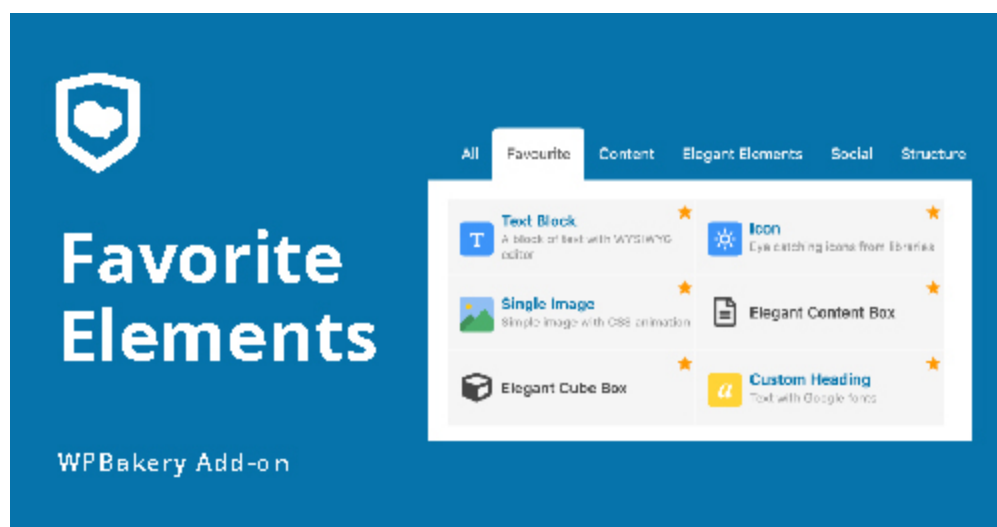

Adding mega menus with just the menu items is pretty much old trend and you still need to depend on premium themes or alternate plugins to make your desired mega menu. With Elegant Elements, you can simply design your mega menu using WPBakery and Elegant Element add-ons elements and take advantage of the advanced menu designing.

Mega menu feature also have an option to display certain menu items to everyone, logged in users only or to only users who are not logged into your website. Adding a menu item for only logged in users is really hard without some custom coding, however, with Elegant Elements, you can do it with just a click.

## Favourite Elements

It become very hard to find the element that you use frequently when there are number of elements. With Elegant Elements, you can now set your frequently used elements as favourites and access them in a separate tab and at the first in the list of elements. You can then just look at the favourites tab or at the top of the elements to find the element that you use frequently.

To add any element to your favourite elements list, just click the star icon in the top right corner of any element and the element will be added to your favourite elements list. If you need to change the favourite elements, you just need to click on the yellow star icon and the element will be removed from your favourite elements list.

All the favourite elements will appear at the beginning of the elements and they can also be accessed in a separate tab called “Favourites”. This will save you some time searching for the element.
