

Importing (/support/documentation/index.php/universal/3-importing-linking)

Importing Studio

Importing

To import the template, simply open Android Studio and import/open the template. Make sure to wait for all the processes (the Gradle Build) to complete before continuing to the next step.

Addition steps

Sometimes, the Gradle Build fails. In some cases additional components are needed, Android Studio will ask you to do download these additional SDK components in the 'messages' tab, simply follow the instructions provided to install and download the additional components.

Still having trouble importing? Read more about common importing errors and how to fix them in our Importing FAQ (</support/documentation/../../community/index.php?action=show&cat=7>).
