# Introduction

## **FireMobile - WordPress & WooCommerce firebase mobile OTP authentication**

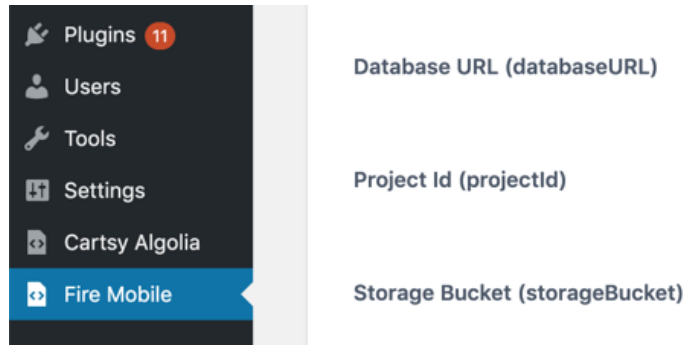

This is a WordPress plugin which enable mobile OTP/Two-Factor login in your site using firebase.

### **Why Firebase**

Firebase provides Firebase's phone number sign-in request quota is high enough that most apps won't be affected. However, if you need to sign in a very high volume of users with phone authentication, you might need to upgrade your pricing plan. See the [pricing](#) page.

## Installation

1. Download the plugin from your envato account.
2. Upload the firemobile.zip file in your wordpress plugin section
3. install and active the plugin
4. go to the Fire Mobile Menu from your wordpress admin

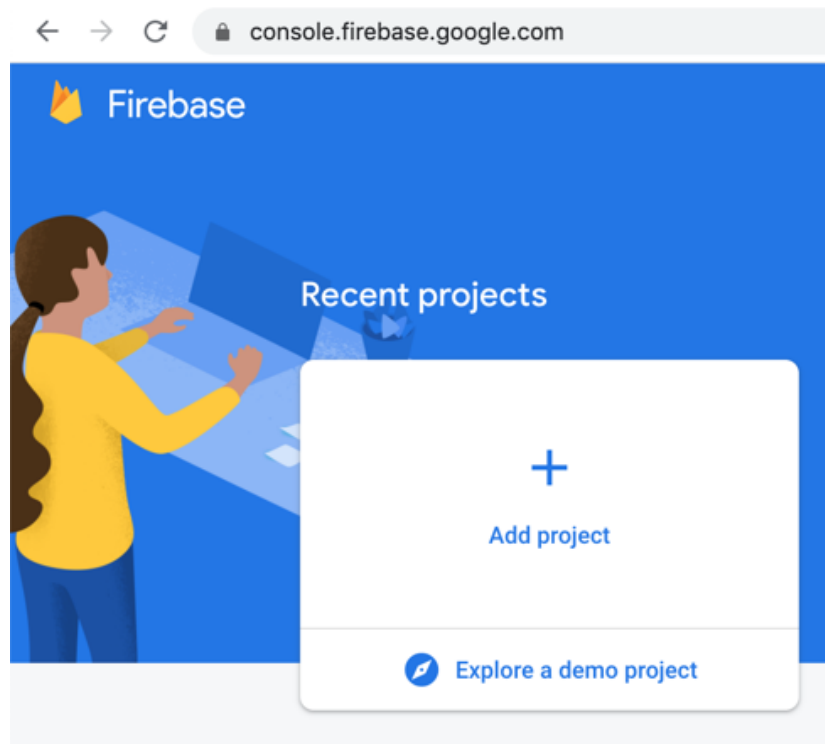

Now check the next section to quick start with the plugin.

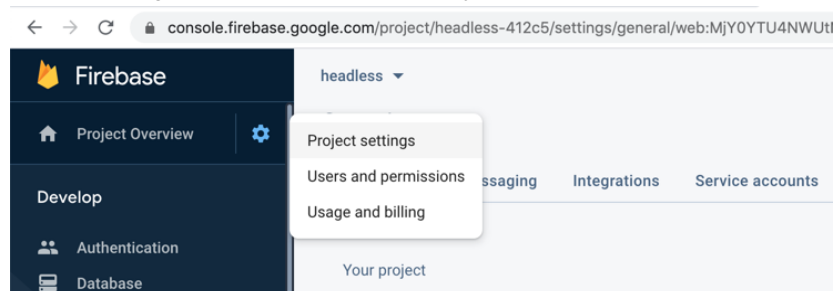

## Quick Start

### Instructions :

1. If you do not have an Firebase project, you can create one from here [link](#)

2. Now go to your Firebase Project overview-> Project settings and copy paste firebase configuration in below fields one by one

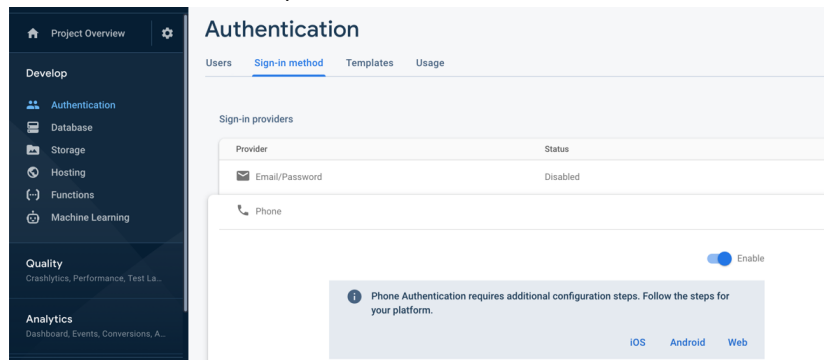

3.

4.

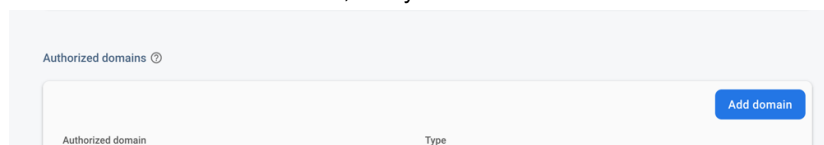

Api Key (apiKey)	<input type="text"/>
Auth Domain (authDomain)	<input type="text"/>
Database URL (databaseURL)	<input type="text"/>
Project Id (projectId)	<input type="text"/>
Storage Bucket (storageBucket)	<input type="text"/>
Messaging Sender Id (messagingSenderId)	<input type="text"/>
App Id (appId)	<input type="text"/>

5. In the Firebase console, open the Authentication section.

6. On the Sign-in Method page, enable the Phone Number sign-in method.

7. On the same page, if the domain that will host your app isn't listed in the OAuth redirect domains section, add your domain.

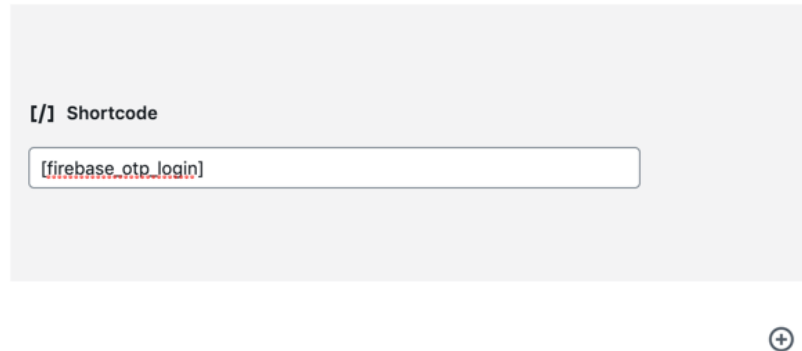

8. Copy this shortcode [firebase\_otp\_login] and add it to any place on your site you like.

9. That's it, You should be able to use mobile login in your WordPress and WooCommerce site.

## Shortcode

```
[firebase_otp_login]
```

just copy the above shortcode and put it into any page

You can also place it into the code,

```
<?php echo do_shortcode('[firebase_otp_login]'); ?>
```

## Shortcode Paramerter

1. 'phone\_button\_text' => default value '**Send Code**'
2. 'code\_button\_text' => default value '**Verify & Login**',
3. 'phone\_toggle\_button\_text' => default value '**Continue with Phone**',
4. 'recaptcha' => default value '**invisible**', // invisible or normal

you can change the above default value by using the shorcode in below format

```
[firebase_otp_login phone_button_text="Send me Code" code_button_text="Verify
```

## Recaptcha

you can either show or hide recaptcha using 'invisible' or 'normal' option in the above shortcode. Recaptcha is must for firebase login.

## Customization

You can use css code to customize the color, font-size etc.

if you want to work on the code then check the below file

php and html code for the shortcode can be found in

**Shortcodes/FirebaseOTPLLogin.php** file. In this file you can change the html structure or any tag but be **careful** changing id or structure might cause the plugin to lose it's functionality.

We recommend to override design from the theme using css code. this way you can receive future update easily.
